pencehe@oneonta.edu

Harry is continuing his series on how to make our lecture presentations more interesting and effective.

Choosing the best colors for a presentation can play a vital role in winning over an audience. Color is not just for decoration; it can help to determine whether the text is legible, emphasize important points, and even help to establish the emotional response of the audience. Studies have shown that proper use of color can dramatically improve the ability of the audience to understand and remember what is said.
